

GazeReader

Ask AI about the paragraph you are looking at, without lifting a finger.

Team Foveation · Asha Patel, Marco Rivera, Jin Park, Devon Brooks

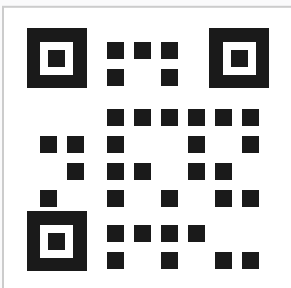

PROBLEM

Academic papers are full of dense passages worth questioning, but reaching for the trackpad to highlight text or switch to a chat tab breaks your focus.

SOLUTION

GazeReader uses your webcam to detect the paragraph you are reading, then answers questions about it by voice or text, with an LLM pre-loaded on the full paper.
